Shenyin Wanguo RMB Mainland Investment Fund

申萬宏源投資管理（亞洲）有限公司
Shenwan Hongyuan Asset Management (Asia) Limited

The Product

The Shenyin Wanguo RMB Mainland Investment Fund (the "Sub-Fund") invests primarily in RMB-denominated and settled debt securities issued in the PRC through a RQFII quota of the RQFII Holder which is a holding company of the Fund Manager.

Risk Disclosure

- The investments of the Sub-Fund are concentrated on securities related to the PRC market. Investment in the PRC market is exposed to various emerging market risks including political, economic, regulatory, legal, foreign exchange, settlement and liquidity risks.
- The Sub-Fund invests in securities through a RQFII which is subject to applicable rules and regulations imposed by the PRC authorities. The RQFII rules are novel in nature, and their application may depend on the interpretation of the Chinese authorities. Any changes to the relevant rules may have an adverse impact on the investment of investors in the Sub-Fund.
- Renminbi is currently not freely convertible and is subject to exchange controls by the Chinese government. Investors may be adversely affected by the movement of the exchange rates between Renminbi and other currencies.
- The Sub-Fund may be exposed to risks associated with changes in PRC tax laws. Such changes may have retrospective effect and may adversely affect the Sub-Fund.
- Investment in the Sub-Fund is exposed to interest rate risk that applies to debt securities. The macro-economic policies and controls of the Chinese government will have significant influence over the capital markets in the Mainland China.
- The Sub-Fund is exposed to credit risk arising from issuers of the RMB denominated debt securities in which it invests. Such securities are typically unsecured debt obligations and are not supported by collateral. The Sub-Fund is therefore fully exposed to the credit/insolvency risk of its counterparties as an unsecured creditor.
- Investment grade securities invested by the Sub-Fund may be subject to the risk of being downgraded to below investment grade securities. The Manager may or may not dispose of the securities being downgraded. If the Sub-Fund continues to hold such securities, it will be exposed to additional risk of loss.
- The RMB denominated debt securities market is at a developing stage and the trading volume may be lower than those of more developed markets. The Sub-Fund may invest in debt securities which are not listed. Even if the debt securities are listed, the market for such securities may be inactive. The Sub-Fund may suffer losses in trading such instruments.
- Some of the RMB denominated debt securities invested by the Sub-Fund may be unrated or below investment grade. Such debt securities are exposed to greater risk because of generally lower credit worthiness and liquidity, greater fluctuation in value and higher chance of default than investment grade bonds.
- Valuation of the investments of the Sub-Fund may involve uncertainties and judgmental determinations, and independent pricing information may not at all times be available. If such valuations are proved to be incorrect, the Net Asset Value of the Sub-Fund may be adversely affected.
- Distributions of the Sub-Fund may be paid from income and/or capital of the Sub-Fund. The Sub-Fund or the Fund Manager may at its discretion pay dividend out of capital of the Sub-Fund. The payment of dividends out of capital represents and amounts to a return or withdrawal of part of original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the Sub-Fund's capital may result in an immediate reduction of the Net Asset Value per Unit. The Sub-Fund or the Fund Manager may amend the Sub-Fund's distribution policy with respect to payment of dividend out of the capital of the Sub-Fund subject to the SFC's prior approval and by giving not less than one month's prior notice to investors. The compositions of the dividends (i.e. the relative amounts paid out of (i) net distributable income and (ii) capital) for the last 12 months are available from the Fund Manager upon request and on the website of the Fund Manager at <http://www.swhyhk.com>. Please note that the aforesaid website has not been reviewed by the Securities and Futures Commission of Hong Kong.

Fund Objective: The Sub-Fund aims at providing medium to long-term capital appreciation by investing primarily in RMB-denominated and settled debt securities issued in the PRC through a RQFII quota of the RQFII Holder which is a holding company of the Manager.

Market Review

After the Spring Festival, the People's Bank of China (PBOC) continued to net withdraw funds in the open market, leading to tighter liquidity and rising funding rates. At the same time, the private enterprise symposium boosted entrepreneurs' confidence, driving a relatively strong stock market with increased volatility. This prompted fund managers and securities firms to sell bonds, dampening market sentiment for going long on bonds, and causing a significant rise in bond yields. By the end of the month, the 10-year government bond yield had risen to 1.72%, marking the first time it reached this level since 2025. Internationally, U.S. economic data such as February's Services PMI, January's housing starts, and existing home sales showed weakness. Coupled with the Federal Reserve's consideration of pausing its balance sheet reduction and the Treasury Department's decision not to increase the issuance proportion of long-term Treasury bonds, these factors drove U.S. Treasury yields downward. Subsequently, former President Trump announced tariffs on goods from Mexico and Canada, as well as a 25% tariff on EU products. Rising uncertainty surrounding the Russia-Ukraine situation further heightened risk-averse sentiment, leading to a sharp decline in U.S. Treasury yields, with the 10-year yield falling to 4.24%.

Market Outlook and Strategy

Looking ahead, the factors influencing the bond market are currently balanced. In the short term, RMB bond yields are expected to remain in a volatile pattern, with the market identifying mid-to-late March as a potential observation window for a phased turning point in the bond market. In the United States, weak manufacturing data and downward revisions to GDP forecasts have added further signs of stagflation to the economy. Over the next two weeks, attention should be given to the impact of key data, such as non-farm payrolls and CPI, on market sentiment and trading activity.

Comments on portfolio

This month, the net asset value (Class I) return of the RQFII fund was 0.56%, compared to -0.95% for the ChinaBond Composite Full Price Index (CBCFPI) over the same period. The fund slightly outperformed the index, primarily due to the shorter duration of the bonds held by the fund. However, the decline in bank convertible bonds also negatively impacted the fund's returns. As of the end of February, the portfolio held approximately 95.15% in bonds, with convertible bonds accounting for 24.50%, a significant decrease compared to the previous period, and 4.33% in public funds/equities. Most corporate bonds held were investment-grade. As of the end of February, the fund's average duration was 1.39 years, with an average yield to maturity of 1.08%. The portfolio comprised 27 underlying assets, achieving a high level of diversification.

	Cumulative Return (Footnote 1 & Footnote 2)	1 month	3 months	6 months	1 year	3 years	5 years	YTD	Since Launch
Class A		-0.62%	0.29%	2.40%	1.28%	-2.66%	-4.08%	-0.55%	17.98%
Class I		-0.56%	0.46%	2.75%	1.98%	-1.31%	-2.03%	-0.44%	24.19%
